

First meeting of the Intersessional Process for considering SAICM and the sound management of chemicals and waste beyond 2020

Dear,

Regarding the SAICM beyond 2020 and considering the decision of opening room for suggestions, here are what we have to contribute;

Fundacentro is a foundation for occupations safety and health from the Brazilian Ministry of Labor.

We are member of the Brazilian Chemical Safety National Committee, coordinated by the Ministry of Environment where we cordite a working group of Chemical Safety Education.

The aim to include and improve Chemical Safety in the educational system, specially professional and technical courses like chemical engineering, chemistry, toxicology, pharmacy, Safety engineering and others.

Also education and information regarding Chemical Safety for the public in general has been considered.

Our proposal for beyond 2020 is that the points above be considered as a SAICM item: “ **Chemical safety in the educational system and for the population**”

Best from

**Fernando V. Sobrinho
Fundacentro / Ministry of Labor
Brazil**
